

Project title : CACAOFOREST - Study for the launch of the Cacao Forest agroforestry project in Côte d'Ivoire and Ghana

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire, Ghana	35 000 €	Agroforestry expertise	ISARA-Lyon, Terra Isara	May 2022 - October 2022

Project's goals and results

Main goals

Following lessons learned in the Dominican Republic since 2019, the project aims to design, test, improve and develop, in partnership with local stakeholders, new sustainable agricultural systems for cocoa cultivation based on the principles of agroforestry and the valorization of various productions. This study aims to identify the modalities of this initiative in Côte d'Ivoire and Ghana.

Specific objectives

OS1. Une synthèse des principaux enjeux de durabilité de la filière cacao avec un focus spécifique sur la place de la question de l'agroforesterie.

OS2. Un état des lieux des principales actions menées et soutenues par d'autres acteurs autour des questions de durabilité de la filière cacao.

OS3. Un état des lieux précis des actions menées par les partenaires du projet avec les coopératives, institutions/organisations locales.

OS4. L'identification des axes/chantiers principaux du futur projet.

OS5. Une étude des opportunités de Fund Raising pour le déploiement d'un projet Cacao Forest Afrique à moyen terme.

SO1. A summary of the main sustainability issues of the cocoa sector with a specific focus on the place of the question of agroforestry.

SO2. An inventory of the main actions carried out and supported by other actors around sustainability issues in the cocoa sector.

SO3. A precise inventory of the actions carried out by the project partners with cooperatives, local institutions/organizations.

SO4. Identification of the main axes/projects of the future project.

SO5. A study of Fund Raising opportunities for the deployment of a Cacao Forest Africa project in the medium term.
