

Project title : CHAIPATEA - Literature review of the production costs of fresh tea leaves

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
	11 520 €	Tea value chain expertise	PFCE - Plateforme du Commerce Equitable / Commerce équitable France	November 2024 - March 2025

Project's goals and results

Main goals

- Get to know the various studies on calculating the production costs of fresh leaf
- Deduce the orders of magnitude for the key parameters determining production costs
- Improve visibility, including for downstream players, of the tea value chain

Specific objectives

SO1. Analyse complementary methods for calculating the cost of producing fresh tea leaves: Living Income / Living Wage and True Price
SO2. Highlight the main gaps in current methodologies: gender, diversity of cropping systems, diversity of harvesting practices, cost of climate adaptation, among other things
