

Project title : RESPIRU - Supporting resilience of women producers of spirulina

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Chad	7 000 €	Spirulina expertise	FAO	November 2015 - November 2015

Project's goals and results

Main goals

RONGEAD's expert mission takes place within the framework of FAO's global initiative to establish a strategic planning process, leading to the identification of five strategic objectives from which regional initiatives have been defined

Specific objectives

Improvement and continuation:

- of the intensification of dihe production through the integrated management of agricultural landscapes and;
- of resilient livelihoods in Africa

Beneficiaries

Women producers of spirulina and local consumers

Results

- ** R1. ** Value chain diagnosis
- ** R2. ** Production equipment made available to producers
- ** R3. ** Best practices in Spirulina production are identified and documented
- ** R4. ** The places and groups in the production chain implementing best practices are identified
- ** R5. ** A detailed plan for a shooting session to produce a video documentary and a photo report is designed
- ** R6. ** The film crew is accompanied on site

Activities

- ** A1. ** Assess the Spirulina value chain (resource management, depletion, harvesting and production system, marketing chain ...)
- ** A2. ** Participate in the purchase and delivery of Spirulina production equipment
- ** A3. ** Make recommendations for actions that could be implemented by FAO or other projects/donors
- ** A4. ** Identify and document best practices in the production, conservation and marketing of spirulina
- ** A5. ** Identify places and groups implementing best practices in Dihe production
- ** A6. ** Accompany film crew to the selected sites
